Motivation

“Goal”: Get more **3D human motion** data.

“Insight”: There’s an **abundance of video** data.

→ Let’s use them as **sources for human motion data**.

Formulation: Multiple Videos of the Same Action

Input: a set of videos (unsynchronized) of the same action.

Output: 3D global motion for each video.

Background: 3D Human Motion Recovery

3D Human Mesh (Motion) Recovery

Input Video

3D Human Mesh (Motion) Recovery

"2D to 3D" causes ambiguity

Input Video

Occluded left arm

A better view

Bridging the Gap between MoCap & HMR

Multi-view can resolve ambiguity

H3.6M [Ionescu et al., 2013]

Waiting

“Relaxed” multi-view data

Penn Action Dataset [Zhang et al., 2013 (ICCV)]

3D data is scarce, and limited in diversity

R^1, t^1

Learned Camera

Results

Validated on our NeMo-MoCap dataset

Comparison to other monocular video-based methods

Results

Demo on existing video dataset

Penn Action

Results

Diversity of video data

Baseball Swing

Baseball Pitch

Conclusion

- We propose a method NeMo for 3D human motion reconstruction by ***leveraging information shared across different videos.***
 - *Code and dataset released*
- We hope to facilitate the direction of ***sourcing 3D human data from existing videos.***
