Overview UniDepth

- Prior-free assumption.
- 3D reconstruction from a single image.
- Spherical-representation and camera-bootstrapping for scalability.

Monocular limitation

Ill-posed problem: lack of generalization.

- Appearance
- Geometric

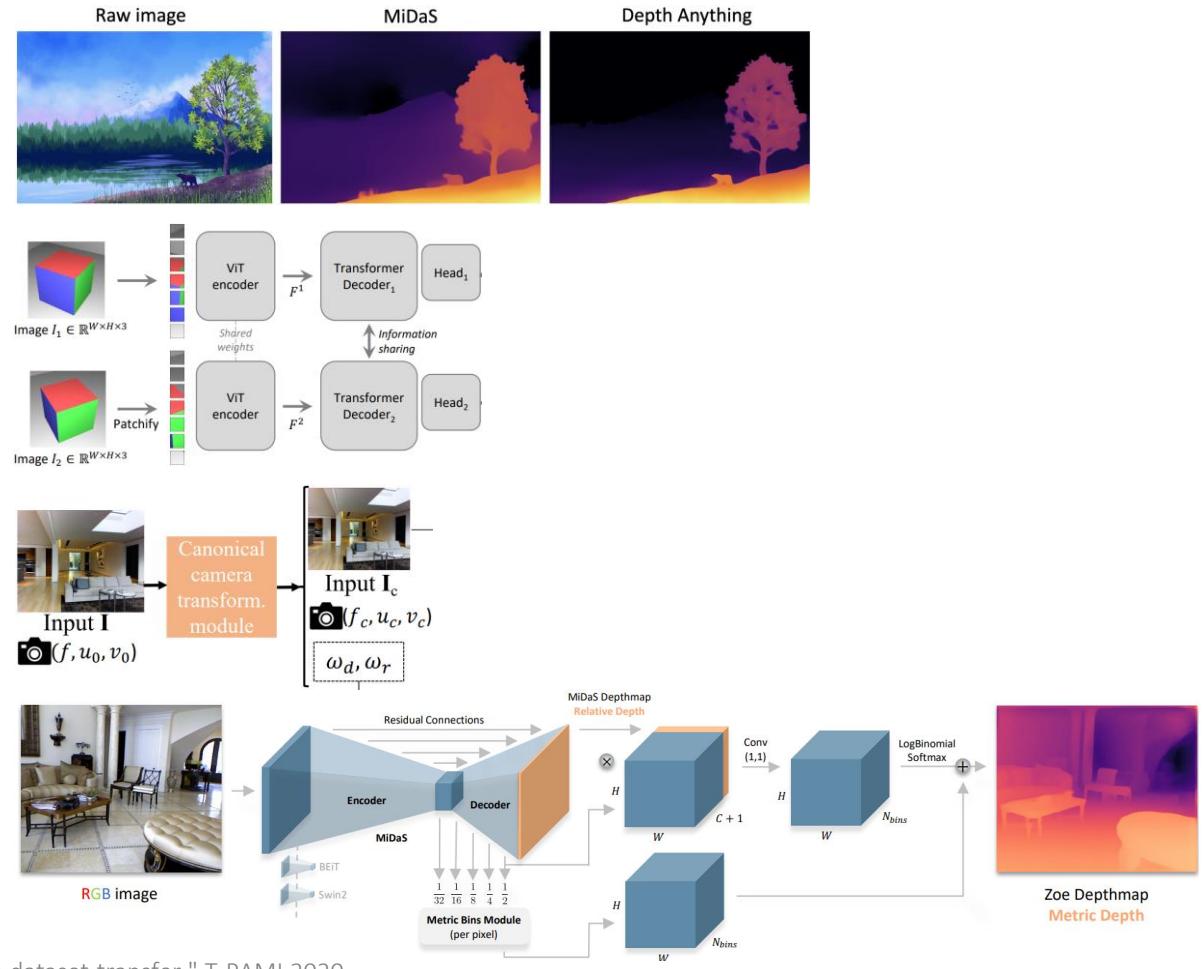

Ambiguity solutions

1. Non-metric [1,2]

2. Multi-view [3]

3. Camera-abstraction [4]

4. Pre-training based [5]

Our approach

Direct regression in 3D limiting ambiguity

1. Pseudo-Spherical representation

2. Geometric Invariance

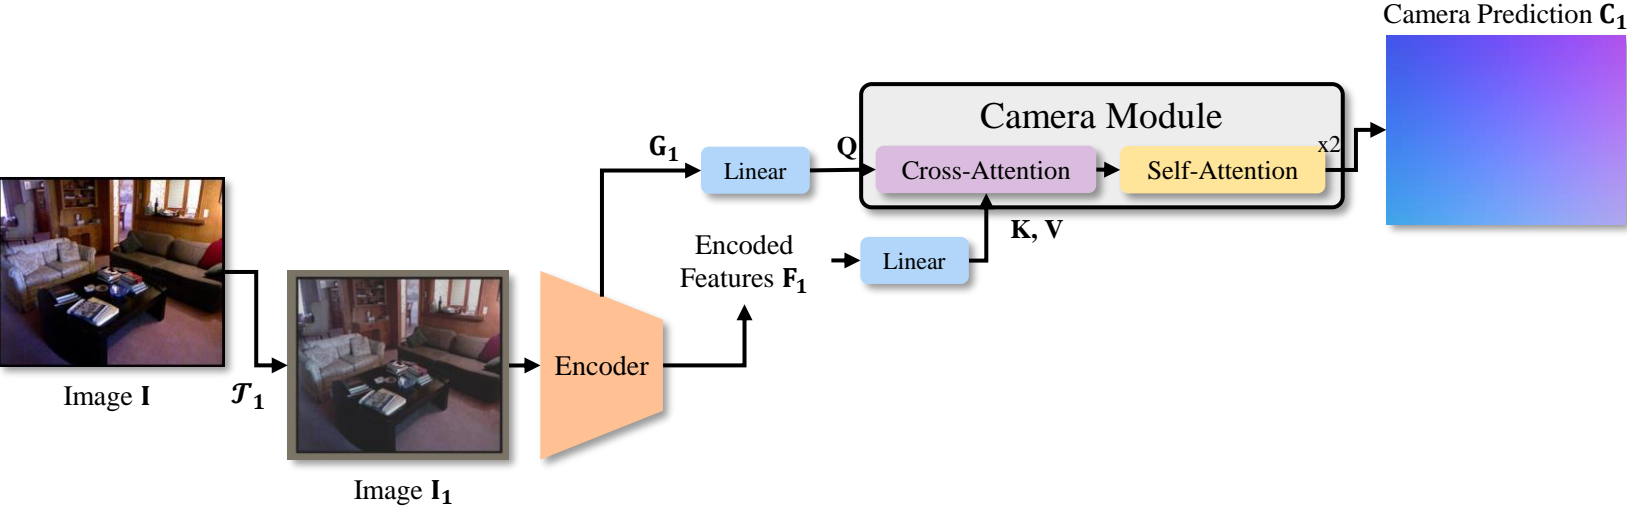

3. Camera Bootstrapping

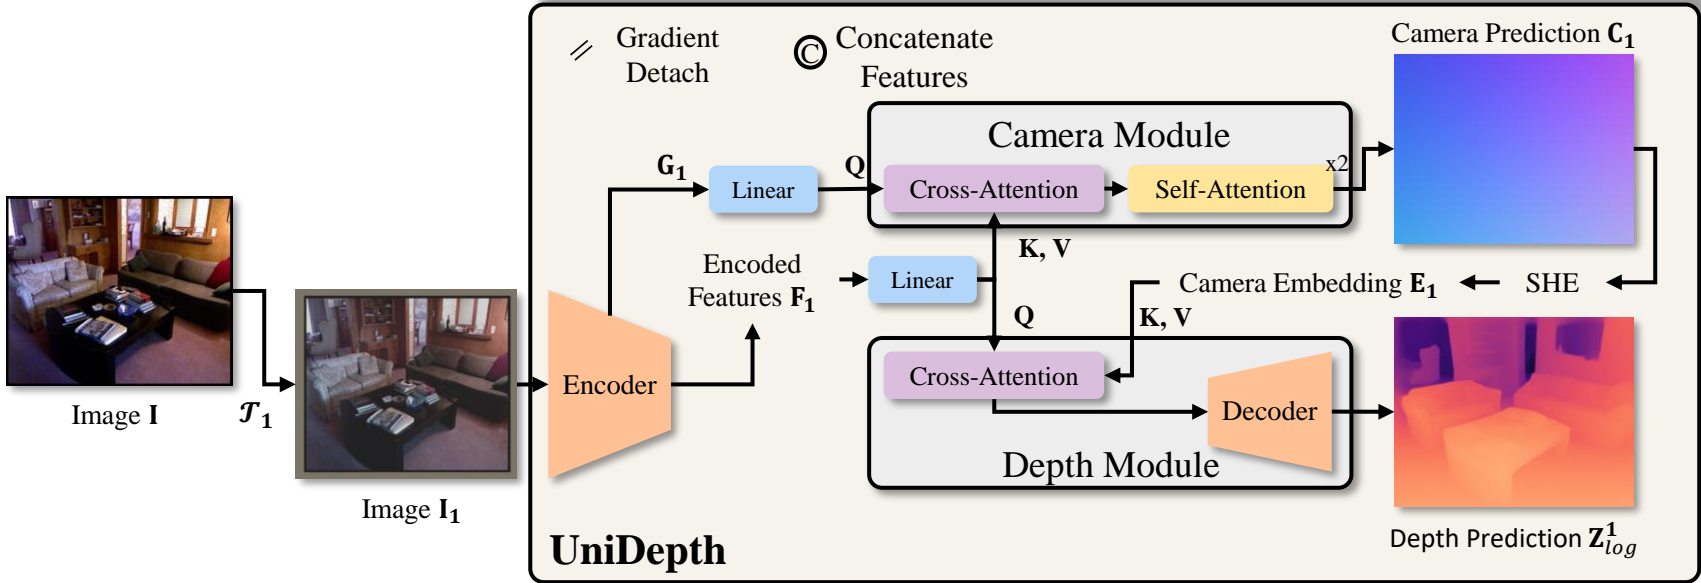

Architecture

Quantitative results

Metric δ_1 : The higher the better. Depth is GT-rescale for comparison fairness with non-metric methods.

Conclusion

- Data is enough for geometric structure priors
- Metric component fragile to strong domain shifts
- Leveraging temporal consistency can improve ambiguities
